

BEAUTY FETCH – PRODUCT CATALOG & STORE SETUP REQUIREMENTS

Product Catalog

1. Navigation

- Remove the separate Categories tab.
- All categories will live under the Products tab.
- When clicking Products, we should see:
 - All categories → each category has a dropdown for subcategories → each subcategory has a dropdown for products.

2. Adding Products to Catalog

Required product fields:

- Name
- Photo
- Variants (color, size, length, curl, diameter, texture, shape).

3. Product View (Admin Dashboard)

- When viewing Products, we should see the full catalog.
- Each product should display which stores it is assigned to (view only, no action here).
- Store-specific actions (e.g., pricing) will only happen inside the store.

Adding a Store

1. Store Information

Adding a store should function like filling out an application. Required info:

- Store name
- Address
- Owner details
- Manager details
- Hours
- Contact info
- Commission rate (only editable by admin in the future).

2. Assigning Products to Store

- After completing store info, show an “Add Products” section.
- This should display the product catalog in the same dropdown structure as the main Products tab (categories → subcategories → products).
- Admin selects products to assign.

3. Store-Specific Pricing

- After selecting products, clicking “Done” will unlock pricing for that store.
- Each product in that store should have its own pricing fields:
 - Cost
 - Retail
 - Margin

4. Product Tracking in Catalog

- Once products are added to a store, the Admin Dashboard → Products (Catalog) should show which stores offer that product (view only).
